

## Can YOU hear that

I believe in our current market place there is a lot of misunderstanding in regards to providing and acoustic rating or value to a tiled floor in a commercial/apartment building. December 2014 VIP issue contained information on this topic which is a MUST READ for tilers who carry out this type of tiling application. *(If you didn't receive a copy of this please contact the office and we will have one issued for you)* I receive many calls along the lines of "Whats the adhesive called that gives me an acoustic floor and also sticks the tiles?" A -We don't have one, that does both! Morgan's Resinflex One Pack will give you an acoustic valve NOT a rating. This is where the issue is. You must do some research of your own to get all the facts and compare apples with apples.. In most cases acoustic rated means - A System not a Product. Most architectural and design requirements will have in writing details such as LnTw+ C1 and a maximum rating of 62. The first part of this is the code, the "C" means correction factor and the "62" is a reading after an acoustic engineer tests an actual tiled room/rooms in the building with specialised equipment. He then applies the code to the reading then the correction factor and the computer program produces a documented rating for that site. This all sounds double Dutch I know however once you are involved in the process you understand it better, it is not a simple science.

When Morgan's manufactured a pour on acoustic membrane and had it tested using Resinflex 1Pack it passed the standards/ requirements. Then the standards were lifted to a higher specification, and it did not meet the new requirement. We undertook more testing and modified the product however it still fell short so we canned it! In simple terms, The point I'm trying to make is, to improve the final reading from say 62 to 61 is not easy and to get into the 50's WOW. Resinflex One Pack will give you a benefit, How much? There are so many grey areas with acoustic readings, drop down ceilings vs direct stick ceilings plus the M.P.A of the concrete all make a difference. "Tile Today", recently wrote an article on acoustic values of the tiles themselves and they also gave different readings! Be aware of claims and read all the information on products and systems, get verification in writing to protect yourself or else it can be a costly exercise!

I strongly recommend if you have any concerns ring Owen Walsh "Senior" The Guru from the ABS Group on 9314 4000. Tell him you're a Morgan's VIP Tiler and he will set you on the correct path to achieve what you are looking for, "The sound of Silence" So to speak. Remember if it sounds too good to be true, it usually is!

# Geoff's Spiel

Dear VIP Tilers

Thankyou to those of you that rang me about my Spiel Last month. The on going saga in regards to cladding of buildings continues, I have continually been in contact with Standards Australia and SAI Global Research section asking how the new Standards are progressing to no avail!! In other words there is nothing in writing that states that above 2.4 metres you must mechanical fix. I have a problem/concerns about adhering weights and height, there are too many grey areas such as the product its self - Surface Preparation, the Substrate, Skill level of the Tradesperson, Correct adhesive, correct application Sun, Wind, Rain, Distractions = Mobile phones! The list goes on, if one term sums it up its "DUTY OF CARE" So for the record Morgan's policy is above 2.4 metres you MUST mechanically fix and use the correct adhesive.

The Ron Peters Golf Day was a huge success, The winner was Gino Salomone from Tile Boutique on a count back, Well Done Gino. Thankyou to all who supported the day including Ron's family. The Boys from TIA looking very smart.

Congratulations to Paul Nisbett VIP# 2065. This months VIP winner.

Until next time  
Keep Safe  
Cheers Geoff

**Paul Nisbett** VIP# 2065

Paul is the owner of Format Tiling Service & a long time VIP member.

### You're support is Required

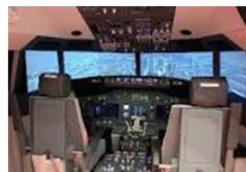

Daniel Picariello Our Representative to world skills in Brazil. Funding for this is critical. Ron Simeon from Poly Techniques is holding a fund raiser golf day at Araluien 21st July @11am shot gun start \$100 including Golf, Cart & Dinner Book now!

*This month we send our first VIP to your INBOX!! Did you receive yours? IF you would like to receive this via e-mail. Please contact the office 9279 8911 or E-MAIL: [sales@morganadhesives.com.au](mailto:sales@morganadhesives.com.au)*

If YOU are next months winner , YOU will be the Pilot of a 737 taking off and landing at an Airport of your choice from all around

### Flight Simulator

*Thank You*
